

If you can design it, we can protect it with Nyalic®

Nyalic can protect any metal surface – sculptures, copper rainwater systems, metal roofs, flashing, interior and exterior metals, aluminum, brass, bronze, and stainless steel. It reduces maintenance and eliminates tea staining, rust and corrosion. By specifying metals coated with Nyalic, you can protect the most valued metal sculptures, the finest museum pieces, decorative ironwork, exterior lighting, fancy knobs, kick-plates, weathervanes, wall cladding, roofs, facades, dormers, decks, fencepost caps, and more. Nyalic maintains a highly polished, like-new appearance for years. It's easy to clean, and it protects against acid rain, weather and moisture. Metals coated with Nyalic have long-term sustainability and are budget friendly.

Nyalic® - Technology that protects

High moisture salt air, and highly corrosive chemicals set up the perfect conditions for corrosion and tea staining on bare metal as well as oxidation of painted metal surfaces.

- **High moisture conditions** – from tropical downpours to heavy snow and ice.
- **Highly corrosive environments** – like salty sea spray and sea air, exposure to corrosive chemicals, acid rain and much more.
- **Nyalic applied at the factory** – is the solution. Nyalic is a high-performance technology that:
 - Prevents corrosion by sealing the surface.
 - Provides an extremely thin water-clear layer of protection to protect against acids, salts, cement, lime, fertilizer, petcoke, coal, soot, sulphur, sea air and much more.
 - Remains thermally stable and flexes with the metal surface at temperatures from below zero to 350° F (177° C) so that it will not crack or peel.
 - Self-levels so it makes repairs easy and seamless with a Nyalic aerosol can.
 - Nyalic does not yellow and is not damaged by UV.

Proven results

Originally developed for the Apollo space program, Nyalic has been proven in harsh industrial environments that include mining, transportation, construction, agriculture, and marine.

Nyalic clear coat surface protectant:

- Seals pores of metal surfaces to eliminate tea staining, corrosion and oxidation of painted surfaces.
- Eliminates high maintenance costs caused by corrosion.
- Used to coat all types of metals, including aluminum, copper, brass, bronze and stainless steel.
- Used on interior and exterior metals.
- Reduces cleaning expenses – dirt floats off Nyalic coated surfaces with a light cleaning.
- Limited 5-year written warranty
- Restores painted surfaces to like-new color and gloss.

Factory Direct Protection

- Parts can be coated at HBI's facility. Call for a quotation on your project.

Rejuvenate and Protect Your Existing Metal Surfaces

Introducing on-site application by NFC

- It's not too late to protect your existing copper or other metal surfaces with Nyalic!
- For your existing surfaces, HBI's on-site application process cleans and rejuvenates bare metal oxidized painted surfaces to a like-new appearance.
