

impress

Imagine being able to clean the scale off your tractor using a wipe of the hand.

This unit at work in a busy fertilizer plant was NYALIC® over-coated months ago... it has not been washed since...

Accountants always talk about investment protection

One of the critical business costs these days is care and maintenance of heavy plant.

Industrial plant costs a lot and in our climate with its extremes there is plenty of corrosion.

Corrosives might be coal, phosphates, sulphur, even acid from atmospheric pollution. All destructive to high value equipment.

With surprisingly small investment your equipment can be protected. Add the Nyalic® protection now will save your company money later.

Nyalic® users report that employees take more care when equipment appears in new condition.

At days end, your employee will have an easier and faster

cleanup, less downtime particularly if you operate 24/7. Better for staff, better for the company. Potentially further savings may be less paid overtime.

Another reason to keep your accountants satisfied.

One international company that found by using Nyalic® they had no need to build a two million dollar vehicle wash.

The key is protection - Using Nyalic® clear polymer provides protection of your plant.

Professionally applied - setting to a clear film, Nyalic® is resistant to most acids and corrosion.

Nyalic® has been proved and tested across many industries.

Used to capsule coat aircraft, passenger terminals, wharf structures, on military assets, thousands of vessels and on heavy industrial equipment.

Nyalic® works for them, it will certainly work well for you.

NOTE'S

A quart of Nyalic® can cover 30 square metres of metal.

Amazing results with Nyalic® are achieved by a professional and very particular process using the 'nylonic' attributes of the coating system.

After cleaning, using Nyalic® proprietary surfactants, the single pack clear coat bonds to the surface.

To achieve the required results professional application is mandatory for industrial equipment to ensure a good working result.

CLEARCOAT SURFACE PROTECTANT

Enviro-friendly

Nyalic® is **NOT** classified as Dangerous Goods

A second 760 which spends its life in a small mountain of Urea...

These loader units serve up to 40 truck and trailer units each day. They work long and hard in a very caustic environment. Sulphur, ammonia, urea, DAP and many sundry nitrates. Nyalic resists this chemical cocktail.

Regular cleaning is nearly impossible during a season. An occasional rain wash being normal until year end.

It is recommended that a regular cycle for cleaning is established to ensure the oilers and hydraulics can be viewed easily. Nyalic is an excellent coating to protect your equipment's radiators and air-conditioning units. Nyalic resists engine temperatures and stops the chemicals bonding and attacking the aluminum cores.

Contact your local Nyalic Industrial Applicator today for a quotation to protect your equipment...

The only damage after many months are the mechanical scrapes.
