

# a quick mast repair

Its pretty sad when corrosion damage can be so expensive and a mast ends up in a condition like this...

... but it happens, however with Nyalic it is very easy to fix.

## CORROSION WAITS FOR NO MAN - AND MARINE DAMAGE LEFT UNCHECKED WILL KEEP CREEPING!

### Need a lifeline?

With a bit of effort an eroded mast can be repaired. Sometimes best done by a professional as the tools and occasional use of acids might mean special conditions but, with some advice, repairs can be a DIY project. Many yachting folk are well capable of doing these repairs.

Restoration using a Nyalic® process is much more cost effective than buying a new aluminum rig and most yachties like saving money.

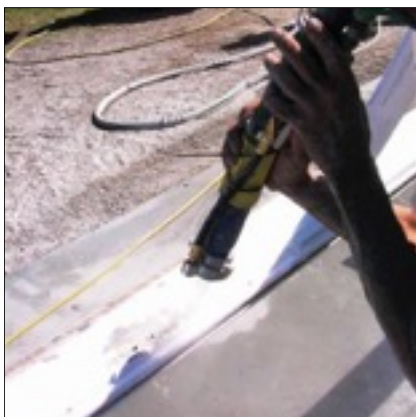

The repair process is well proven on many super-yachts around the globe and crews report their ongoing maintenance is low, near zero!

Consult with your Rigger or shipwright about using the Nyalic process on your mast or better still, contact your Nyalic representative...
