

She's big, sexy, very fast and... and 100% Nyalic® coated.

A tourist boat like no other, Quicksilver VIII operates daily out of Port Douglas - carries 450 passengers and operates at high speed serving the World Heritage listed and much acclaimed 'Great Barrier Reef.'

Cleanliness and having an ultimate presentation are key to the professionalism within the Quicksilver business. They chose Nyalic clear as their coating of choice.

The mechanically dimpled pattern on the hull has been a tradition at Quicksilver for many years.

Using spectacular decals with this shiny combination, QVIII is absolutely stunning at rest or when at sea.

Traditional paint systems add hundred's of kilos to a vessel of this size.

Weight means more fuel burn and loss of speed, less weight and no paint means more profit.

A large benefit includes less maintenance and a faster end of day cleanup for the crew.
