

RUST!!
Surely not

316 still stains

People do not understand that a property needs to be periodically washed to ensure the nitrates, metal oxides and salts are washed off the surface.

Coated and protected
NYALIC
Clear Surface Protectant

Lock out the O²

Treated with acid Y to etch the surface minimally and in the process - changing the color of the 'rustical... then a professional application of Nyalic seals the surface.

Even on the best jobs

NYALIC TREATED at the top
UNTREATED at the bottom

Even the best architectural property will show a bit of rust. Twenty years ago, maybe not so much but over the years the quality of steelwork has diminished. Stainless Steel in STAIN LESS, to 100% rust proof so you do require to give it a periodic washing with fresh water. A fresh water wash is important for all Australian buildings at least yearly to protect the asset.
